English.

C. Random point mutations were introduced into the alpha fragment of E coil beta-galactosidase. The will type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it of generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3 ends generated in this way are used as primers for reverse transcriptase and the molecules are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which course also p80575.

Oligonuclectride probe MK14-A consists of nucleotides 5-95 of 10 (51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Introducing random point mutations into nucleic acods -
by prepn of single stranded template, annealing a primer, elongation,
misincorporation, completion of molecules and screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Generic DNA sèquence to génerate a random TSAR petide library.
TSAR; totally synthetic affinity reagent; synthetic; binding domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Random point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Base substituted E.coli beta-galactosidase alpha-fragment.
E.coli beta galactosidase alpha-fragment; base substitutions; ss.
Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17 G; 11 T; 108 Others;

PT Identifying proteins or peptide(s) which bind a ligand - by

Romprising a recombinant vector library expressing fusion proteins

PT screening a recombinant vector library expressing fusion proteins

PT comprising a binding domain and an effector domain

PT screening a recombinant vector library expressing fusion proteins

PT screening a recombinant vector library expressing fusion proteins

PT comprising a binding domain and an effector domain

CC 70469 is a generic DNA sequence used to generate random TSAR peptide

CC 7076/NNB5/Z(NNB)/ZUCG)(NNB)/4 (TGC)Y. X and Y are fitanking restriction

CC 51cs (X is not the same as Y) that are not specified further. This sequence generates peptides that are cloverleaf in structure. Other generated by these generic sequences are shown in 70465-68. Other specific peptides

CC 51cs (X is not the same as Y) that are not specific pertides

CC 51cs (X is not the same as Y) that are cloverleaf in structure. Other generated by these generic sequences are shown in 70565-68. Other specific pertides

O70467 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)16(FCC)(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(NNB)12(
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2442 CGAGCAGAGCTCCTCCTGAATGAGGCCAGCAGTGGCCTCTTCGACGTTCTACGCTT 2501

CG 70468 is a generic DNA sequence used to generate random TSAR (Totally
CSYNthetic Affinity Reagents) peptides.This generic formula can also be

CC and Y are flanking restriction sites (X is not the same as Y) that are

CC and Y are flanking restriction sites (X is not the same as Y) that are

CC ther specified further. Other generic sequences are shown in Q70466.68.

CC Other specified further concatenated heterofunctional proteins or peptides,

CC Comprising at least two functional regions - a binding domain with

CC Affinity for a ligand and a second effector peptide portion that is

CC comprising at least two functional regions - a binding domain with

CC femically or biologically active. They may further comprise a linker

CC femically or biologically active. They may further comprise a linker

CC femically or biologically active are also designed so

that the expressed peptide contains 2 or 4 cysteine residues positioned

CC fin, or flanking, the unpredicted or variant residues. These residues

CC offer some degree of conformational rigidity to the peptides. The TSARs

CC confer some degree of conformational rigidity to the peptides.

CC addiver a chemically or biologically active molety, eq.

CC addiver a chemically or biologically active molety, eq.

CC addiver a chemically or biologically active molety, eq.

CC addiver and also replace the function of macromolecules, eq.

CC addivers methods of hybridoma formation or in vivo antibody

CC for complex methods of hybridoma formation or in vivo antibody

CC allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a bluding domain and an effector domain bisclosure; Paqe 35; 255pp; English.

Q70466 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides.This generic formula can also be represented as follows:X(NNB)1(TGC)(NNB)10(TGC)2(NNB)4Z(NNB)8(TGC)(NNB)9Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2055 CGTGCTCAACTACGAGCGGGCGCGCCCCCGGCCTCCTGGGCGCCTCTGTGCTGGGCCT 2114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Generic DNA sequence to generate a random TSAR-9 petide library. TSAR: totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.

CC 070466-68. Other specific peptides generated by these generic sequences are shown in R65181-54. TSARs are concatenated heterofunctional proteins or shown in R65181-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a clinker peptide between the 2 domains. The obligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues confers some degree of conformational rigidity to the peptides. These conformational rigidity to the peptides. The TSARs or compans. Comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal contractione, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. complex methods of hybridoma formation or in vivo antibody production. Cr he TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.

CD THE TSARS are easily characterised and have designed activity allowing confired and rapid detection in a screening process.

CD THE TSARS are easily characterised and have designed activity allowing confired and rapid detection in a screening process.

identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a blinding domain and an effector domain bisclosure; Page 35; 255pp; English and an effector domain bisclosure; Page 35; 255pp; English English and an effector domain TSAR (Totally Q70467 is a generic DNA sequence used to generate random TSAR (Totally Sylfainty Reagents) peptides. This generic formula can also be represented as follows: X(NNB)16(TGC)(NNB)18. X and Y are flanking restriction sites (X is not the same as Y) that are not specific peptides generated by these generic sequences are shown in Q70466-68. Other specific peptides generated by these generic sequences are shown in R65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a finity for a ligand and a second effector peptide portion that is affinity for a ligand and a second effector peptide portion that is peptide between the 2 domains.They may further comprise a linker peptide between the 2 domains.They may further comprise a linker peptide between the 2 domains.They are 4 cysteine residues positioned
                                                                                         Generic DNA sequence to generate a random TSAR petide library. TSAR: totally synthetic affinity reagent; synthetic; binding domain; effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.

PA (UYNC-) UNIV NORTH CAROLINA.

PA (UXNC-) UNIV NORTH CAROLINA.

PA (UNIV) IS a generic DAN Sequence used to generate random TSAR (Totally CAROLINA).

CA (CAC) Z(NNB) Z. And Y are flanking restriction sites (X is not the same CACOLINA).

CA (CAC) Z(NNB) Z. And Y are flanking restriction sites (X is not the same CACOLINA).

CA Y) that are not specified further. The peptides generated by this and CACOLINA.

CA Y) that are not specified further. The peptides generated by this and CACOLINA.

CA Y) that are not specified further. The peptides generated by this and CACOLINA.

CA Y) that are not specified further. The peptides generated by this and CACOLINA.

CA Y) that are not specified further. The peptides second heterofunctional proteins of peptides chemically or a ligand and a second CACOLINA.

CA (UNIV) TA (UNIV) TA
in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compans. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the coll. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                      ö

This generic formula of peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain

Disclosure; Page 35; 255pp; English.

O70469 is a generic DNA sequence used to generate random TSAR peptide

CTGC)(NNB)GCNNB)Z(TGC)(NNB)14(TGC)T. X and Y are flanking restriction

Sites (X is not the same as Y) that are not specified further. This

Sequence generates peptides that are cloverleaf in structure. Other

Sequence generates peptides that are cloverleaf in structure. Other

Generated by these generic sequences are shown in R6515-54. TSARs are

concatenated heterofunctional proteins or peptides, comprising at least

two functional regions - a binding domain with affinity for a ligand and

a second effector peptide portion that is chemically or biologically

active. They may further comprise a linker peptide between the 2 domains.

The oligonucleotides are also designed so that the expressed peptide

conformational rigidity to the peptides. The TSARs or compensing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2499 CITCAIGIGCCACCACGCGIGCGCATCAGGGGCAAGICCIACGICCAGGGCAGI 2558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        070472;
10-APR-1995 (first entry)
Generic DNA sequence to generate a random TSAR peptide library.
TSAR; totally synthetic affinity reagent; synthetic; binding domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 bnnbnnbnnbcacnnbnnbnnbnnbcacnnbnnbnnbnnbnnbnnbnnbnnbnnbnnnnnn 62
                                                                                                                                                                                                                       Generic DNA sequence to generate a random TSAR peptide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SARs are easily characterised and have designed direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
